

LUSEAUX®

MICRO CHLORINE TEST PAPER

MEASURES AVAILABLE CHLORINE CONCENTRATIONS

GENERAL DESCRIPTION: A test paper in a convenient dispenser which gives instant readings of free available chlorine in chlorine based sanitizing solutions. Match points on the color chart indicate 10-50-100-200 ppm of free available chlorine. Each dispenser comes with a color chart and 2 rolls of test paper which provide for well over 200 tests.

APPLICATION: Open dispenser and remove paper roll from the foil wrapping. Place the roll back into the dispenser and replace dispenser top. Tear a strip of MICRO CHLORINE TEST PAPER from the dispenser and dip into solution to be tested. Match at once to the color chart. The color match should be read between 100 and 200 ppm. If the color match is below 100 ppm, add more sanitizer until the solution is over 100 ppm. Refer to sanitizer label for more information.

Always consult your local health department for more information regarding sanitizing regulations for your area.
